

Clean-Up Phase:

How to Avoid Ongoing Charges From Azure Account

1. Stop (Deallocate) the Virtual Machines

- Open the **Azure Portal**
- Navigate to **Virtual Machines**
- Select each VM created for the lab
- Select **Stop** (Deallocate)

2. Delete the Resource Group (Recommended)

The safest and cleanest way to remove everything is to delete the entire resource group.

1. Navigate to **Resource Groups**
2. Select the lab resource group (for example: [ad-lab-rg](#))
3. Select **Delete resource group**
4. Type the resource group name to confirm
5. Select **Delete**

3. Verify All Resources Are Removed

Azure only stops billing once all billable resources are deleted. Check that:

- No virtual machines remain
- No managed disks remain
- No public IP addresses remain
- The resource group no longer exists

Optional: Keep the Environment

If you plan to continue experimenting or reuse this lab:

- Deallocate VMs when not actively using them
- Monitor costs in **Azure Cost Management**
- Delete the resource group once finished
